                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nature 406,477-483 (2000).

-!- FUNCTION: REQUIRED FOR SECRETION OF CHOLERA TOXIN THROUGH THE OUTER MEMBRANE.

-!- SUBCELLULAR LY: BELOANTON: Outer membrane (Potential).

-!- SIMILARITY: BELOANS TO THE EXED/OUTD/PULD/XBBD FAMILY.

-!- CAUTION: REF.2 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO A FRAMESHIFT (POSSIBLY NATURAL) IN POSITION 55.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "DNA sequence of both chromosomes of the cholera pathogen Vibrio

"The complete hrp gene cluster of Pseudomonas syringae pv. syringae
el includes two blocks of genes required for harpinpss secretion that
are arranged colinearly with Yersinia ysc homologs.";

Mol. Plant Microbe Interact. 8:733-746(1995).

-: FUNCTION: INVOLUED IN THE SECRETION OF A PROTEINACEOUS ELICITOR OF
THE HYPERSUNITIVITY RESPONSE IN PLANTS.

-: SUBCELLULAR LOCATION: Outer membrane.
-: SIMILARITY: BELONGS TO THE PULD/OUTD/EXED/XPSD FAMILY.
